

Exclusive Interview with Zachary Vorhies - the Google Whistleblower

At AMPFest 21, I had the chance to meet and interview legendary Google whistleblower Zachary Vorhies.

On his homepage <https://zachvorhies.com/about>, he explains his leak down to the smallest detail and has also written a book about it, Google Leaks (<https://googleleaksbook.com>).

Zachary Vorhies - interviewed by Vicky Richter

How long did you work for Google?

8.5 years

What information have you published?

<https://www.zachvorhies.com>

These files documenting Google's censorship were released to the DOJ's Antitrust Division and to the public via Project Veritas in August 2019. The copy here allows researchers and the public to find out by reading how Google implements censorship in its own words and on a global scale. A zip file containing all the files can be [downloaded here](#).

What exactly makes this tool different from other search engines?

Machine Learning Fairness is Google's censorship machine. It is the fusion of artificial intelligence and critical race theory and censors Google search, news and YouTube according to Google's political agenda.

To what extent does it restrict the free search for information?

Machine Learning Fairness prioritizes websites with a high "EAT" score, which stands for "Expertise", "Authoritativeness" and "Expertise". For an example of what kind of websites have a high EAT score, I recommend the first document on this page:

https://www.zachvorhies.com/msm_rankings.html

To what extent does it restrict the free search for information?

Only news sites and sites that Google lets through the gatekeeping are allowed to have priority in Google search. Any kind of populist site that is popular with the people but not part of the establishment is systematically weeded out. The collateral damage is that all health information now goes to places like webmd and other pharma cartel front groups. In politics, everything is graded according to the media cartel. Everywhere you look now, Google has corrupted its search results so that a cartel of unelected bureaucrats dictates to the common people what they can and cannot find on the internet. All organic search results have been replaced with highly refined, artificially re-ranked search results. Google, like processed food, is bad for the mind and an impediment to social progress and undermining the marketplace of free ideas and commerce.

Is Google politically controlled?

Yes. Google is controlled by buying hedge funds Blackrock and Vanguard, the same hedge funds that control the other big tech companies. There are even similar breakdowns of ownership. You don't even have to believe in any conspiracy theories because all the information is public knowledge, and this is the same shadowy group that has undue influence over all social media. In my opinion, they are functionally equivalent to a foreign hostile intelligence operation against the people. They are an existential threat to democracy unless people wake up and change their search behavior or the government regulates them.

To what extent are BigTech companies working with different governments?

France has direct access to Facebook's social media network, which is pretty amazing. The police have vast amounts of information at their disposal. In the United States, Democrats were caught writing letters about who Google should ban next. This is a direct violation of the First Amendment, as the courts in the United States have found. The government cannot outsource censorship to a corporation. The courts have found this to be wrong, and the cooperating companies in this case are "quasi-state actors" when they implement the government's direct censorship.

Are there parallels to Twitter and its censorship campaign against Trump?

Although each major tech company has different nuances in their complex and ever-changing set of rules for acceptable content, they're pretty much all on the same page, working together to silence dissent. For example, they all decided that the Hunter Biden laptop was Russian disinformation, and then the media later admitted that it was real. You can believe that these are all honest mistakes, that Google/Twitter/Facebook just happened to be wrong and there's no collusion, or you can realize that maybe they're all under the same ideological pressure because they all have the same massive hedge funds invested in them. Yes. Google runs software to help people find information. But they have destroyed their own value proposition at the most fundamental level. The same is true of Twitter and Facebook. Big Tech is afraid that the population will turn against them, and they will go the way of other failed social media companies that suddenly collapse when people switch to a better social media system. Because of this, the media viciously attacks anyone who tries to create an alternative technology platform to Big Tech's social media giants.

What made you decide to become a whistleblower?

I did not want to be complicit in this crime against humanity. How could you live knowing that you stand as a coward before yourself and before the eyes of the Supreme Creator? When I face my Creator at the end of my life, I will be asked, "What did you do when faced with an existential evil for humanity?" I can now truthfully answer, "I sacrificed everything to let the people of the world know that an Artificial Intelligence weapon was pointed directly at their heads."

How has your life changed in this regard?

The realization that the company I loved so much, Google, would try to dominate the United States and the world through its monopoly on information was devastating to me. I never thought they would ever do that. But now I realize I was naive and trusting. We all were. Realizing that they are a controlled front organization just as bad as the Nazis or the Communists has been an eye-opener. I don't think I could ever be fooled that way again, but the price is that I will never be normal again. I will always carry around the scar that the world is still ruled by sociopaths.

The act of blowing the whistle atoned for my involvement in this machine. That act gave me new life. Now I wake up every day with the intention and drive to free the minds of the people of the world. When people understand what Google is really up to, then something will change and societies will transform so that Google can no longer steal elections (for example) in their countries.

Are you threatened?

Not since I blew the whistle. Google gave me problems before I announced that I was the secret Google whistleblower. When all the information became public, Google ignored me, and it has remained that way to this day. However, I am sure that one day the people in charge will decide to kill me and make it look like an accident or a health problem. I've resigned myself to that fate because if the time period is long enough, everyone's survival rate drops to zero. What matters is how you lived your life to make the world a better place.

Do you get help from organisations or authorities?

Yes, for example, the ADL and SLPC give Google clues as to who should be censored. These organizations are the worst and are basically a libel laundering operation extorting money from their victims. They also take their cues from the mainstream media cartel. The funny thing is that they don't take action against a target until the mainstream media slanders that person.

What are your plans for the future?

The new control systems will be based on artificial intelligence. This essentially means a technocracy, a new form of government that no one has discussed yet. People are still in the "capitalist vs. communist" political dialectic. But I am here to tell you that the future is neither capitalist nor communist, but a highly efficient technocracy. This technocracy will divide society into the owners, the operators, and the subjects, who will be in the majority. Labor and capital will be completely decoupled from the common worker. The technocratic state will have no use for the common man, who will be a clumsy, inefficient sack of meat when compared to the superhuman intelligence, power, efficiency and endurance of the tireless robotic workforce that will replace humans. The intellectual capacity of any human will pale in comparison to the hive intelligence of the supercomputer data centers.

We are literally witnessing the birth of a new society. What we do now in the coming years will be felt for generations. It could even change the course of human history in ways we cannot even imagine. Everyone has a role to play in making history.

Never underestimate the power you have to change the world and make it a better place. Be the change you want to see in the world.
